POSTMASTER: Send address corrections to WORLD COAL c/o Mercury International Ltd, 365 Blair Road, Avenel, NJ 07001.

Cover Information

The ROM crushing station is a 400 tph two-stage application. It consists of a McLanahan FB36-60-21 feeder breaker; the hopper is controlled by a 750 mm square grizzly. The feed is then reduced to a nominal 200 mm before passing into a McLanahan DDC 24 x 72 tertiary sizer, which then crushes the coal to a nominal 50 mm.
